Evolution and Human Behaviour

Darwinian perspectives on
the human condition

THIRD EDITION

John Cartwright

*Senior Lecturer in Biological Sciences
at the University of Chester*

palgrave

Brief Contents

Part I	Historical and Methodological Issues	1
1	Historical Introduction: Evolution and Theories of Mind and Behaviour, Darwin and After	3
2	Foundations of Darwinian Psychology	17
Part II	Two Pillars of the Darwinian Paradigm: Natural and Sexual Selection	33
3	Natural Selection, Inclusive Fitness and the Selfish Gene	35
4	Sex and Sexual Selection	50
Part III	Human Evolution and its Consequences	69
5	The Evolution of the Hominins	71
6	This Quintessence of Dust: The Hominin Package	87
Part IV	Adaptations and Developmental Plasticity	109
7	Adaptations and Evolved Design	111
8	Life History Theory	138
Part V	Cognition and Emotion	163
9	Cognition and Modularity	165
10	Emotions	190
Part VI	Cooperation and Conflict	203
11	Altruism and Cooperation	205
12	Conflict and Crime	229
Part VII	Mating and Mate Choice	253
13	Human Sexual Behaviour: Anthropological Perspectives	255
14	Human Mate Choice: The Evolutionary Logic of Sexual Desire	268
15	Facial Attractiveness	293
16	The Paradox of Homosexuality	312
17	Incest Avoidance and the Westermarck Effect	323
Part VIII	Health and Disease	339
18	Darwinian Medicine: Evolutionary Perspectives on Health and Disease	341

19	Three Case Studies in Evolution and Health: Diet, Cancer and Mental Disorders	371
Part IX	Wider Contexts	397
20	The Evolution of Culture: Genes and Memes	399
21	Ethics	418
	Glossary	435
	References	447
	Index	484

Part I Historical and Methodological Issues	1
1 Historical Introduction: Evolution and Theories of Mind and Behaviour, Darwin and After	3
1.1 The origin of species	4
1.1.1 New foundations	5
1.2 The study of animal behaviour: ethology and comparative psychology in the 20th century	5
1.2.2 Ethology 1900–70	5
1.2.2 Comparative psychology 1900–70	8
1.3 The rise of sociobiology and evolutionary psychology	10
1.3.1 From sociobiology to evolutionary psychology	10
1.3.2 The influence of evolutionary psychology	13
2 Foundations of Darwinian Psychology	17
2.1 Testing for adaptive significance in evolutionary psychology	17
2.1.1 Pitfalls of the adaptationist paradigm: ‘Just So Stories’ and Panglossianism	18
2.1.2 Adaptations and fitness: then and now	20
2.2 Darwinian methodologies: evolutionary psychology, human behavioural ecology, Darwinian anthropology and gene–culture coevolution theory	21
2.3 Evolutionary psychology	22
2.3.1 The modular approach of Tooby and Cosmides	24
2.3.2 Challenges to the modular view of evolutionary psychology and the concept of the EEA	25
2.4 Darwinian anthropology and human behavioural ecology	27
2.4.1 The phenotypic gambit	27
2.4.2 The problem of fitness measurement	29
2.5 Gene–culture coevolutionary theory	29
2.6 Prospects	30

Part II	Two Pillars of the Darwinian Paradigm: Natural and Sexual Selection	33
3	Natural Selection, Inclusive Fitness and the Selfish Gene	35
3.1	The mechanism of Darwinian evolution	35
3.1.1	The ghosts of Lamarckism	36
3.1.2	Darwin's difficulties	37
3.1.3	Genes, behaviour and heritability	38
3.2	Inclusive fitness, kin selection and altruism	42
3.2.1	Hamilton's rule and inclusive fitness	42
3.2.2	Coefficient of relatedness (r)	44
3.2.3	Application of Hamilton's rule and kin selection	45
3.2.4	Kin recognition and discrimination	46
3.3	Levels of altruism	46
3.3.1	Selfish genes and compassionate vehicles	46
3.3.2	The stupidity of genes	47
4	Sex and Sexual Selection	50
4.1	Describing mating behaviour: systems and strategies	50
4.1.1	Problems with the concept of mating systems	50
4.2	The sex ratio: Fisher and after	52
4.2.1	Why so many males?	52
4.2.2	Fisher's argument	53
4.3	Sexual selection	53
4.3.1	Natural selection and sexual selection compared	53
4.3.2	Predicting the direction of inter- and intrasexual selection	59
4.4	Consequences of sexual selection	62
4.4.1	Sexual dimorphism in body size	62
4.4.2	Post-copulatory intrasexual competition: sperm competition	63
4.4.3	Good genes and honest signals	64
Part III	Human Evolution and its Consequences	69
5	The Evolution of the Hominins	71
5.1	Systematics	71
5.1.1	How to classify humans and their relatives	71
5.2	Origins of the hominins	72
5.2.1	Speciation and Earth history	72
5.2.2	Hominin speciation	73
5.3	Phylogeny of the Hominoidea	75
5.3.1	Branching sequences and dates	75
5.3.2	Early hominins	76
5.4	The supremacy of <i>Homo sapiens</i>	78
5.4.1	Out of Africa or multiregionalism?	78
5.4.2	Female exogamy	81
5.4.3	The mitochondrial Eve hypothesis	82
5.5	Hominin evolution and body size changes	84
5.5.1	Absolute body size	84
5.5.2	Sexual dimorphism	85

6	This Quintessence of Dust: The Hominin Package	87
6.1	Bipedalism	87
6.2	Hair loss	87
6.2.1	The cooling hypothesis	87
6.2.2	Hairlessness and hunting	91
6.2.3	Hairlessness, ectoparasites and sexual selection	91
6.3	Brain size	94
6.3.1	What makes humans so special?	94
6.3.2	Allometry	95
6.3.3	Ancestral brains and encephalisation quotients	96
6.3.4	The energetic demands of brains	98
6.3.5	Theories of brain enlargement	101
6.3.6	Comparing social and ecological theories	101
6.4	Language	103
6.4.1	Natural selection and the evolution of language	103
6.4.2	Dating the origin of human language: anatomical evidence	105
Part IV	Adaptations and Developmental Plasticity	109
7	Adaptations and Evolved Design	111
7.1	Teleonomy	111
7.2	Types of adaptations	112
7.2.1	Short-term reversible changes: homeostasis, acclimation, habituation and acclimatisation	112
7.2.2	Developmental acclimatisation and developmental plasticity	114
7.2.3	Epigenetics, imprinting and transgenerational effects	117
7.2.4	Universal adaptations and adaptations to local ecologies	125
7.3	The problem of individual differences: heritability and genetic diversity	131
7.3.1	Models assuming genetic variability	132
7.3.2	Models assuming low genetic variability	135
8	Life History Theory	138
8.1	Life history variables	138
8.2	Quantity and quality, mating and parenting	140
8.3	The ages of man – a view from life history theory	141
8.3.1	Birth and infancy	141
8.3.2	Childhood and the inter-birth interval	142
8.3.3	Adolescence, puberty and the timing of menarche	144
8.3.4	Old age, the menopause and the function of grandparents	154
8.3.5	Ageing, senescence and death	157
8.4	LHT, human behavioural ecology and the demographic transition	158
Part V	Cognition and Emotion	163
9	Cognition and Modularity	165
9.1	The modular mind	165
9.1.1	Epistemological dilemmas: rationalism or empiricism?	165
9.1.2	The localisation of brain function	166
